Trillium Health Centre Goes Live With ConnexALL *Installation is first large-scale integration with Philips Telemetry System*

Toronto, Canada – Serving over one million Ontarians, Trillium Health Centre recently transformed their 763 bed, two-site hospital with ConnexALL® technology. Enhancing communication between Philips devices (including Patient Monitors and Telemetry Packs) and Cisco Voice-Over IP (VOIP) wireless phones, ConnexALL makes it easier for clinical staff to monitor patients at Trillium's Queensway West location. ConnexALL ensures instant notification by integrating communication tools - Trillium staff knows immediately when patients' vital signs require closer monitoring, or when the system becomes inoperable due to technical error.

The Philips/Cisco integration enhances communication in Trillium's new seven-storey, 136 bed West Wing, along with an integration between a Rauland-Borg Responder IV nurse call system and Cisco VOIP wireless phones. The West Wing project follows a Rauland/Cisco pilot implementation in 2008.

David Tavares, CEO of GlobeStar Systems, explains what this means for other hospitals: "We've provided hundreds of hospitals that use Philips patient monitoring a way to ensure that critical notifications are getting to the people that need them. This makes the lives of staff easier and gives patients an added level of comfort, knowing that clinical staff has immediate access to the information they need to ensure exceptional quality of care. And at the end of the day, the patients are what healthcare is all about."

Patients at Trillium Healthcare have noticed the improved environment too. Noting that they feel safe and secure in the quieter environment, an increased number are even saying "I don't want to go home!"

Used successfully in numerous healthcare organizations, ConnexALL enables instant communication among mobile staff and patients. With ConnexALL's versatile integration options, detailed comprehensive reporting capabilities, and easy-to-use, clinically-designed interface, end-users achieve immediate improvements:

- ✓ Reduce operating costs by integrating existing technology in one common platform
- ✓ Streamline communications and improve workflow, resulting in better clinician response time and increased staff and process efficiencies
- ✓ Increase workplace satisfaction and staff retention
- ✓ Improve patient care and safety
- ✓ Reduce patient delays

About GlobeStar Systems:

GlobeStar Systems is the market leader in event-driven intelligent notification solutions. Our flagship product, ConnexALL, is a state-of-the-art communication engine that seamlessly integrates an array of applications to any existing system. The ability to manage critical alarms and event notification anywhere, anytime gives any business the competitive edge on productivity, service and security.
