

Connexall[®]
CONNECTIVITY WITHOUT LIMITS

CAMPU S

CONNECTING CAMPUS ENVIRONMENTS TO THE POWER OF INFORMATION IMMEDIACY™

CONNECTING THE DOTS IN CAMPUS ENVIRONMENTS

Connexall® Campus helps secure property, reduce loss, speed first response, escalate issues and protect lives by getting critical immediate information to the right people who can take immediate action.

Multi-building campus environments are often a security and safety challenge. Security and emergency staff on campuses around the world use Connexall to deliver immediate information to first responders, emergency services, students and employees no matter where they are on campus.

Whether you are a two-site hospital, a 40 building, 400 acre university campus, or a state or provincial government, Connexall Campus can enhance safety, security, and communication where you need it most. Because it works with a variety of communication devices, including wireless phones, landlines, email, and scrolling marquees, you can reach just about anyone, anywhere when you need to.

Secure property, reduce loss, escalate issues and protect lives on your campus with Connexall

How it Works

Imagine a secure, timely, and completely integrated solution that gives you the power to relay information to the right people, at the right time. With Connexall Campus, you can experience the true power of unlimited connectivity – by using many of the tools you already own!

Leverage existing infrastructure in Emergency Management departments and Response teams,

enhancing existing emergency procedures, and strategically notifying large groups of individuals in the event of a natural disaster, criminal activity, biohazard, or weather conditions.

Each potential event is represented on a desktop monitor by a simple, user-designed icon – simply double-click to start the pre-programmed notification process. Notify key team members by wireless phone, landline, email, or pre-set messages on scrolling marquees. Dramatically reduce incidents of human error with pre-programmed, automatic notification strategies for designated events.

As members of your team acknowledge receipt, Connexall's graphic display is updated, so the dispatcher always knows who has and has not been made aware of the event. If team members do not acknowledge within a pre-specified time limit, Connexall Campus automatically escalates the notification to a secondary communication device or to a different team member.

After the event, built-in reporting capability allows you to review who the message was sent to, how long it took them to acknowledge, and whether or not escalation was required, giving you the opportunity to improve your response to the next event.

Connexall Campus enhances and improves your existing security and emergency strategies. With one platform, pre-programmed rules, and automatic

CAMPUS

For multi-building campus environments in which information immediacy is critical to safety and security, Connexall Campus delivers integrated communications for security and emergency staff who need to have immediate information in order to respond fast and effectively.

escalation, Connexall ensures that the right people get the right information when they need it, no matter where they are. Other benefits include:

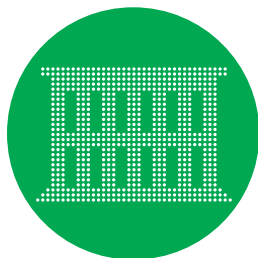

- Faster notifications, meaning faster response times
- A dramatic manual dispatching workload reduction, reducing the chance of human error
- The ability to create icons and emergency procedures for events where a physical alert or alarm system does not exist
- An intuitive and easy-to-learn graphical user interface that was designed with extensive user input
- The ability to create detailed reports, in order to measure and improve response times
- Being able to limit user access, so only administrators can create or change emergency notification processes

Connexall's Campus solution gives you the option of including real-time photos of security breaches so that security staff can see what triggered the alarm. You can also send attachments with each email notification; for example, when an event is triggered, you can send your emergency policies and procedures manual to ensure that protocol is followed.

Reporting

Included in the core of Connexall is robust management reporting capability, providing management teams with data relevant to their specific departments, and allowing for precise fine tuning of workflow processes. Facility managers can leverage this tool to improve overall operational efficiency and manage workload.

Connexall also offers optional MS-SQL support, allowing you to generate and manipulate custom reports identical to those you already use.

Combining total interoperability and expandability with enterprise-level reliability, smart software and deep consulting support, Connexall is the choice for organizations who need to revolutionize how they work.
