CONNECTIVITY WITHOUT LIMITS

CONNECTING HEALTHCARE ENVIRONMENTS TO THE POWER OF INFORMATION IMMEDIACY

# HEALTHCARE

# CONNECTING THE DOTS IN HEALTHCARE

*For healthcare environments in which information immediacy significantly increases patient quality of care, patient safety and healthcare provider effectiveness, Connexall Healthcare delivers integrated communications that optimizes workflow, decreases cost-of-care and leverages investment in current systems.*

With proven performance in over 600 hospitals worldwide, Connexall has been delivering results for over ten years. Completely vendor neutral and device agnostic, Connexall works with your existing communications system to ensure information immediacy, allowing clinical and support staff to do their jobs more efficiently.

Whatever area of your hospital's performance you are looking to improve, we can help. Whether you need integrated communications to speed up OR turnover, nurse call integration to increase patient and staff satisfaction, or building management system consolidation to make sense of all your alarms, the Connexall team will work with you to find a unique solution that will fit your specific needs.

## **OR Workflow**

Connexall's integrated OR solution helps hospitals around the world optimize patient flow and reduce downtime by speeding up OR turnover, making supply requests more efficient, and displaying OR status in real-time to all personnel. One large US hospital saved enough money through more efficient workflows to pay for its Connexall OR solution in just two months!

## **ER Solution**

Connexall's ER solution focuses on the two patient flow bottlenecks virtually every hospital faces: between the waiting room and the ER, and between the ER and inpatient units. By enhancing communications and enabling information immediacy, you know exactly which hospital beds are available and which

units are accepting patients. Abnormal test results and the outcomes of patient consults can be communicated immediately, with no unnecessary waiting. A major Canadian hospital reduced average length of stay in the ER by 17% after implementing a Connexall ER and bed status solution.

## **Hospital-wide Bed Status**

Connexall's Hospital-wide Bed Status solution ensures staff know – in real time – which beds are ready, occupied, unavailable, or being turned over, helping you maximize bed placement and improve patient flow. Automatic notifications of a patient's pending discharge can alert the admissions office, which optimizes resource allocation, reducing the amount of time a bed is empty.

## **Hospital-wide Support Staff Management**

By connecting porter's wireless devices to Connexall, clinical staff send requests with a simple double-click; each request is sent directly to the correct porter. Porters acknowledge or escalate requests as needed, or directly call back at the touch of a button to the requestor if clarification is required. This means no more uni-directional paging, missed calls or phone tag, saving you time and money.

## **Patient Monitoring**

Send patient monitoring alarms directly to clinician's wireless devices, enhancing staff mobility while eliminating worry over missed alarms. With near-to-real-time notification and filtering of nuisance alarms (on supported devices and systems), doctors and nurses

# HEALTHCARE

*For organizations who understand the power of information immediacy to create highly effective workflows, Connexall delivers the world's leading high-performance communications integration platform.*

respond in a more timely manner and have important information about the situation before they get to the patients bedside.

### **Nurse Call**

Creating direct two-way communication between patients and staff enhances nurse's mobility while prioritizing requests as they are received, leading to more efficient workflow and increased patient satisfaction.

By connecting the nurse call station at the patient's bedside to the nurse's wireless device, the unit clerk does not have to spend time searching for the 'right' nurse – reducing the need for overhead paging and creating a better healing environment for patients.

### **Staff and Patient Safety**

In hospitals, staff and patient safety is a key concern. With Connexall, you can configure a button on each staff member's wireless devices to be the designated 'panic' button. Pushing it sends an alert to security immediately, and when combined with Real-Time Location Services, the exact location of that alarm is

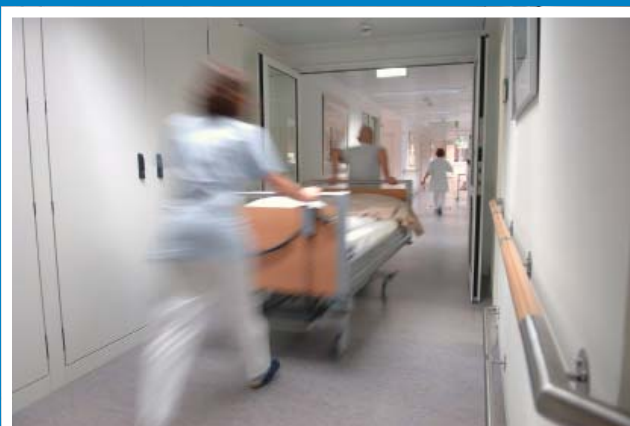

transmitted – ensuring faster response times. Connexall also works with your existing patient wandering and infant abduction systems, sending alarms to staff members as events are happening.

### **Building Management**

By integrating your existing building management systems with Connexall, you can see all your alarms and the status of all your equipment in one place, in real time. Fire alarms, HVAC systems, building access, and many other systems can all be monitored centrally, through a single piece of software, making it easier for your staff to monitor multiple systems and stay on top of critical events.

### **Reporting**

Included in the core of Connexall is robust management reporting capability, providing management teams with data relevant to their specific departments, and allowing for precise fine tuning of workflow processes. Managers can leverage this tool to improve overall operational efficiency and manage workload.

# ARE

*Combining total interoperability and expandability with enterprise-level reliability, smart software and deep consulting support, Connexall is the choice for organizations who need to revolutionize how they work.*
